

MASTER OF ENGINEERING IN SYSTEMS ENGINEERING, CONCENTRATION IN INTERDISCIPLINARY ARTIFICIAL INTELLIGENCE

Overview

** Please note that the former title of this program was: Master of Systems Science and Engineering with Concentration in Interdisciplinary Artificial Intelligence.*

Summary

- Degree offered: Master of Engineering in Systems Engineering
- Registration status options: Full-time; Part-time
- Language of instruction:
 - English
- Program option (expected duration of the program):
 - within two years of full-time study
- For immigration purposes, the summer term (May to August) for this program is considered a regularly scheduled break approved by the University. Students should resume full-time studies in September.
- Academic units: Faculty of Engineering (<https://engineering.uottawa.ca/>), Telfer School of Management, (<http://www.telfer.uottawa.ca/en/prospective-students/interdisciplinary-programs/>) Department of Mathematics and Statistics (<http://science.uottawa.ca/mathstat/en/>), Department of Economics (<https://socialsciences.uottawa.ca/economics/>)

Program Description

The Systems Engineering program provides qualified students with the opportunity for master's-level study in a broad range of areas that emphasize transdisciplinary work in the context of general systems analysis. The emphasis in Systems Engineering is on the development of analytical and integration skills for use in the resolution of complex applied problems that require a broad-based perspective.

Many professors in Information Technology and Engineering, Mathematics and Statistics, Administration, Economics, and other disciplines are active in the Systems Engineering program as instructors, student advisers and thesis directors. Others are interested in ongoing Systems Engineering activities including the seminar series, and Systems Engineering applications days.

The graduate program in Systems Engineering is an interdisciplinary program specially designed for those who are interested in the analysis and modelling (mathematical and computer) of natural and man-made systems. It provides the professional with skills and knowledge required to understand, control, predict and optimize behaviour in a variety of fields from engineering and computer science to management and applied economics. The program is supervised by a Committee composed of representatives from the Department of Economics, the School of Information Technology and Engineering, the Telfer School of Management, and the Department of Mathematics and Statistics.

To accommodate part-time students, the core courses are usually offered in the late afternoon or evening.

Learn more about this program (<https://www.uottawa.ca/faculty-engineering/graduate-studies/programs/systems-science/>)

Main Areas of Research

Their areas of research, both theoretical and applied, span a wide variety of fields:

- Operations research
- Deterministic and probabilistic modelling
- Optimization
- Computer science
- Information systems
- Control
- Economic modelling

Other Programs Offered Within the Same Discipline or in a Related Area

- Master of Engineering in Systems Engineering
- Master of Applied Sciences in Systems Engineering
- Master of Applied Sciences in Systems Engineering, Concentration in Interdisciplinary Artificial Intelligence

Fees and Funding

- Program fees:

The estimated amount for university fees (<https://www.uottawa.ca/university-fees/>) associated with this program are available under the section Finance your studies (<http://www.uottawa.ca/graduate-studies/programs-admission/finance-studies/>).

International students enrolled in a French-language program of study may be eligible for a differential tuition fee exemption (<https://www.uottawa.ca/university-fees/differential-tuition-fee-exemption/>).

- To learn about possibilities for financing your graduate studies, consult the Awards and financial support (<https://www.uottawa.ca/graduate-studies/students/awards/>) section.

Notes

- Programs are governed by the academic regulations (<http://www.uottawa.ca/graduate-studies/students/general-regulations/>) in effect for graduate studies.
- In accordance with the University of Ottawa regulation, students have the right to complete their assignments, examinations, research papers, and theses in French or in English. Research activities can be conducted either in English, French or both, depending on the language used by the professor and the members of his or her research group.

Admission Requirements

For the most accurate and up to date information on application deadlines, language tests and other admission requirements, please visit the specific requirements (<https://www.uottawa.ca/graduate-studies/programs-admission/apply/specific-requirements/>) webpage.

To be eligible, candidates must:

- Have a bachelor's degree in Computer Science, Economics, Engineering, Mathematics, Operations Research, Science or a related area with a minimum average of B (70%).

Note: International candidates must check the admission equivalencies (<https://www.uottawa.ca/graduate-studies/international/study-uottawa/admission-equivalencies/>) for the diploma they received in their country of origin.

- Undergraduate courses in probability, linear algebra, differential equations and computer programming are prerequisites for the core courses of the Program. Details regarding the level and content of prerequisite courses are included in the information package which is sent to all applicants. If a student lacks any of these courses, he will normally be required to complete them as a condition of admission. Entering students who lack the required undergraduate preparation may be permitted to enter a qualifying program.

Language Requirements

Applicants must be able to understand and fluently speak the language of instruction (French or English) in the program to which they are applying. Proof of linguistic proficiency may be required.

Applicants whose first language is neither French nor English must provide proof of proficiency in the language of instruction.

Note: Candidates are responsible for any fees associated with the language tests.

Notes

- The admission requirements listed above are minimum requirements and do not guarantee admission to the program.
- Admissions are governed by the academic regulations (<http://www.uottawa.ca/graduate-studies/students/general-regulations/>) in effect for graduate studies.
- No equivalencies or advanced standing are granted. A student who has already successfully completed some of the compulsory units, may be allowed to replace those units with elective units. For details, see the general regulations in effect for graduate studies, section B 2.7 c).
- Candidates must clearly select the program without thesis on their application form.

Program Requirements

Requirements for this program have been modified. Please consult the 2025-2026 (<https://catalogue.uottawa.ca/en/archives/>) calendar (<https://catalogue.uottawa.ca/en/archives/>) for the previous requirements.

Master's with Coursework

To receive this Master's degree, a student enrolled in the program must successfully complete 30 course units.

Students must meet the following requirements:

Compulsory Courses

GNG 5301	Professional Skills and Responsibility ¹	3 Units
SYS 5100	Systems Engineering	3 Units
SYS 5130	Systems Optimization and Management	3 Units
SYS 5170	Essential Concepts in Data Science	3 Units
SYS 5180	Mathematics for Artificial Intelligence	3 Units
SYS 5185	Foundations and Applications of Machine Learning	3 Units
SYS 5295	Ethics for Design, AI, and Robotics	3 Units
6 course units from:		6 Units
GNG 5902	Industry Project ²	
SYS 5975	Project in Systems Engineering ²	
3 optional course units from the list of optional courses		3 Units

List of Optional Courses

CSI 5122	Software Usability	3 Units
DTI 5125	Data Science Applications	3 Units
DTI 5175	Mobile Commerce Technologies	3 Units
DTI 6160	Cyber Security Strategy, Architecture and Governance	3 Units
ECO 6143	Economics of Natural Resources	3 Units
ELG 5103	Optical Communications Systems	3 Units
ELG 5119	Stochastic Processes	3 Units
ELG 5170	Information Theory	3 Units
ELG 5375	Digital Communications	3 Units
ELG 5376	Digital Signal Processing	3 Units
ELG 5378	Image Processing and Image Communications	3 Units
EMP 5116	Issues in Management and Operation of Communication Networks	3 Units
EMP 5120	Product Development and Management	3 Units
EMP 6362	Project Management	3 Units
SYS 5120	Applied Probability	3 Units
SYS 5140	Economic System Design	3 Units
SYS 5170	Essential Concepts in Data Science	3 Units
SYS 5180	Mathematics for Artificial Intelligence	3 Units
SYS 5185	Foundations and Applications of Machine Learning	3 Units
SYS 5186	Topics in Systems Engineering	3 Units
SYS 5187	Topics in Artificial Intelligence	3 Units
SYS 5295	Ethics for Design, AI, and Robotics	3 Units

Note(s)

¹ GNG 5301 should be completed during the first trimester of registration in the program.

² The project must be an AI project related to Systems Engineering.

Research

Research at the University of Ottawa

Located in the heart of Canada's capital, a few steps away from Parliament Hill, the University of Ottawa ranks among Canada's top 10 research universities. Our research is founded on excellence, relevance and impact and is conducted in a spirit of equity, diversity and inclusion.

Our research community thrives in four strategic areas:

- Creating a sustainable environment
- Advancing just societies
- Shaping the digital world
- Enabling lifelong health and wellness

From advancing healthcare solutions to tackling global challenges like climate change, the University of Ottawa's researchers are at the forefront of innovation, making significant contributions to society and beyond.

Research at the Faculty of Engineering

Areas of research:

- Chemical and Biological Engineering
- Civil Engineering
- Electrical Engineering and Computer Science
- Mechanical Engineering

For more information, refer to the list of faculty members and their research fields on **Uniweb**.

IMPORTANT: Candidates and students looking for professors to supervise their thesis or research project can also consult the website of the faculty or department (<https://www.uottawa.ca/study/graduate-studies/academic-unit-contact-information/>) of their program of choice. Uniweb does not list all professors authorized to supervise research projects at the University of Ottawa.

Courses

SYS 5100 Systems Engineering (3 units)

Controllability and observability, Euler-Lagrange equations, Pontryagin maximum principle, dynamic programming, linear quadratic regulator problem, matrix Riccati differential equations and properties of their solution, design of optimal regulator based on steady state solution of the Riccati differential equation, time optimal control, LaSalle bang-bang principle, applications to motor speed control, satellite attitude control, etc.

Course Component: Laboratory, Lecture, Tutorial

SYS 5110 Foundation of Modelling and Simulation (3 units)

Fundamental aspects of systems modelling and the simulation process. Elements of continuous system simulation. Issues relating to the numerical solution of ordinary differential equations. Elements of discrete event simulation. Generation of random numbers and variates. Simulation validation and quality assurance. Introduction to simulation languages.

Course Component: Lecture

SYS 5120 Applied Probability (3 units)

An introduction to stochastic processes, with emphasis on regenerative phenomena. Review of limit theorems and conditioning. The Poisson process. Renewal theory and limit theorems for regenerative processes; Discrete-time and continuous-time Markov processes with countable state space. Applications to queueing.

Course Component: Lecture

SYS 5130 Systems Optimization and Management (3 units)

Analysis of user requirements and model design. Data mining. Use of optimization software. Systems thinking and its application to economic systems and hierarchical systems. Applications to economic systems simulation, modeling, optimization and management.

Course Component: Lecture

SYS 5140 Economic System Design (3 units)

Introduction to the epistemology of systems thinking and its application to economic systems. Basic concepts of complex systems thinking including hierarchical systems and economic systems simulation and behaviour. Soft systems thinking. Examples from other fields of application will be reviewed from an interdisciplinary perspective.

Course Component: Lecture

SYS 5160 Systems Integration (3 units)

Planning, design of complex systems from continuous to discrete time. Synthesis of systems methodology. State estimation. Parameters identification. Discretization and stochastic effects. Dynamic, logic control. Modelling, discrete event, simulation examples.

Course Component: Lecture

SYS 5170 Essential Concepts in Data Science (3 units)

An introduction to the foundations of data science using a case study approach; overview of the data science process: types of tasks and models, data manipulation, exploratory data analysis, data summarization and data visualization; predictive modeling, descriptive modeling; reporting and deployment.

Course Component: Lecture

The courses CSI 4142, DTI 5125, DTI 5126, MAT 4373, IAI 5120 and SYS 5170 cannot be combined for units.

SYS 5180 Mathematics for Artificial Intelligence (3 units)

Mathematical foundations (algebra, statistics) of modern artificial intelligence applicable to machine learning, deep learning, vision, natural language and speech processing. Eigenvectors and Eigenvalues. Single Value Decomposition. Principal Component Analysis. Vector/Matrix Calculus. Gradient Algorithms. Common Distributions. Maximum Likelihood Estimation. Entropy and Cross Entropy. Kullback Leibler Divergence. Viterbi Algorithm.

Course Component: Lecture

SYS 5185 Foundations and Applications of Machine Learning (3 units)

The capabilities and limitations of machine learning; problem formulation; supervised and unsupervised learning techniques; deploying, monitoring, and evaluating machine learning models; storytelling and assessing the results of learning; current advances in application areas such as business, law, arts, social sciences and education.

Course Component: Lecture

The courses CSI 5155, ELG 5255, IAI 5100, IAI 5101, MIA 5100 and SYS 5185 cannot be combined for units.

SYS 5186 Topics in Systems Engineering (3 units)

Recent and advanced topics in the field of Systems Engineering and its related areas. Topics vary from year to year.

Course Component: Lecture

SYS 5187 Topics in Artificial Intelligence (3 units)

Recent and advanced topics in the field of Artificial Intelligence and its related areas. Topics vary from year to year.

Course Component: Lecture

SYS 5190 Directed Readings in Systems Science (3 units)

Directed Readings in Systems Science

Course Component: Research

Courses SYS 5190, SYS 5975 cannot be combined for units.

SYS 5295 Ethics for Design, AI, and Robotics (3 units)

The interplay between Artificial Intelligence, society, the law, and ethics; the course will explore how advances in Artificial Intelligence affect the law and other social institutions, and, conversely, how societal, legal, and ethical considerations affect the development and deployment of Artificial Intelligence technologies.

Course Component: Lecture

The courses CSI 5195, DTI 5310, DTO 5310, ELG 5295, IAI5 130 and SYS 5295 cannot be combined for units.

SYS 5975 Projet en génie des systèmes / Project in Systems Engineering (6 crédits / 6 units)

Volet / Course Component: Recherche / Research

Les cours SYS 5190, SYS 5975 ne peuvent être combinés pour l'obtention de crédits. / Courses SYS 5190, SYS 5975 cannot be combined for units.
